

NovaERP

High-Performance Manufacturing

Built for the shop floor.

A keyboard-first, scanner-first ERP unifying procurement, warehouse, manufacturing, billing, and dispatch — designed for industrial speed and offline reliability.

Avg. scan response <50 ms

Screen switch <200 ms

Offline-ready

Web · Desktop · Mobile

NovaERP is an end-to-end manufacturing ERP covering the full cycle — from raw-material procurement to dispatch — with an aggressive focus on operator productivity. Every screen is designed for one-handed scanner use, low-click workflows, and millisecond-scale response times.

Secure sign-in, three ways

Users sign in with **password**, a **4-digit operator PIN** for shop-floor speed, or a **badge scan**. The shell remembers warehouse, shift and locale, and the connection state is shown live so operators always know whether they are working online or offline.

 **NovaERP**
HIGH-PERFORMANCE MANUFACTURING

Built for the shop floor.

Keyboard-first, scanner-first ERP for warehouse, manufacturing, procurement, and billing. Operates online or offline at industrial speed.

Biometric

End-to-end encrypted - v1.0.0

WH-MAIN · Pune Plant

Operator PIN mode

Pre-fills last-used operator so handovers between shifts take seconds, not minutes.

Connection awareness

"Connected to backend API" badge confirms live sync before sign-in.

Badge / biometric ready

Reserved hooks for ID-card scan and biometric for higher-security plants.

Workspace context

Logs you into your warehouse and shift in one tap — no extra picklists.

Live KPIs the moment you log in — revenue, order pipeline, fulfilment SLA, machine availability, attendance, and alerts. Drilldowns route you straight to the relevant module instead of forcing you through menus.

Real-time KPIs

Sales, stock-on-hand, dispatch SLA, manufacturing throughput — refreshed live from the API.

Alert center

Low-stock, overdue POs, credit-limit breaches, picking backlog — never miss an exception.

Shift-aware widgets

Numbers respect the active warehouse and shift so supervisors see only their slice.

Deep links

Every tile is clickable — jump from a KPI directly to the underlying transactional list.

Items group into **product families** with short 3-4 letter codes (e.g. **COIL** for Coconut Oil, **AGRB** for Agarbathi) and unlimited variants on **size**, **scent / flavour**, and **container / grade**. The MRP and Dealer Excel sheets were imported automatically — with spelling fixes and family-grouping — yielding 319 production-ready SKUs.

WH-MAIN - Pune

Scanner ready

v1.0.0

- Variant axes

Three independent axes (size / scent / pack) eliminate SKU sprawl while preserving granularity for billing.
- Excel import

One-shot import normalises units, fixes typos like "Cardmom→Cardamom", and joins MRP+Dealer rates.
- HSN & GST mapped

Tax classification stored at the product level so every invoice is GST-compliant by default.
- Inline edit

Edit pricing, packaging, or status from the list without opening a separate form.

Every customer is bound to a price list — **Retail**, **Dealer**, or **Distributor**. Prices resolve through a deterministic waterfall: *explicit override* → *quantity-break tier* → *list formula* → *product default*. Changes propagate instantly to every open quote and invoice draft.

Price Lists

RETAIL (default) **Active**

Almonds ALMN	₹1,400	₹1,400	1400	—	—	0%
Amla Powder ANLP	₹80	₹80	80	—	—	0%
Amaranth Seeds AMRS	₹250	₹250	250	—	—	0%
Anapa pappu ANPA	₹60	₹60	60	—	—	0%
Amla pickle APKL	₹260	₹260	260	—	—	0%

Formula-based tiers

e.g. Dealer = $MRP \times 0.78$. Define once, apply to every product automatically.

Per-SKU overrides

Pin a special price for strategic SKUs without breaking the formula for the rest.

Quantity breaks

"5–9 units: 5% off, 10+: 12% off" — applied as the operator types the qty in the quote.

Currency & validity

Time-bounded promotional price lists with automatic fallback to the standard tier.

The quote list is the sales operations heartbeat — filterable by status (*Draft, Submitted, Accepted, Converted, Expired, Rejected*), with revision badges, expiry countdown, and a one-click **Share** action per row.

WH-MAIN - Pune

Scanner ready

v1.0.0

Immutable revisions
Editing a submitted quote auto-snapshots the previous version. Full audit trail, no overwrites.

Validity tracking
Each row shows "31d left" so reps act before quotes go stale; expired quotes drop out of pipeline.

Credit-limit guardrails
Quotes exceeding limit are flagged and routed to Approvals — only those, not every order.

One-click share
Share submitted quotes via Print, link copy, WhatsApp, or Email — without leaving the list.

A single-screen drawer holds everything an inside-sales rep needs: customer + credit context, payment terms, a **type-as-you-go variant search**, live ATP (Available-to-Promise), GST roll-up, and inline rate / discount. Submit → automatically becomes a Sales Order and triggers Picking.

Live ATP

Each line shows real-time stock minus reservations + open POs + open production — no surprises at invoicing.

Variant-aware search

Search "agarbathi champa 90" finds the exact variant in milliseconds.

Auto-pricing

Rate auto-fills from the customer's assigned price list. Overrideable, but defaulted.

Revisions in history pane

Click "History" to diff what changed, who changed it, and when — names resolved, not raw IDs.

Hit **Share** and pick the channel — Print/PDF, copy link, WhatsApp, or Email. NovaERP mints a tamper-proof token, opens WhatsApp/Mail with a pre-filled message and embedded link, and lets you **revoke & rotate** the token if a quote leaks. Customers don't need a NovaERP login.

This is a system-generated quotation. Prices are valid until 17 Jun 2026. Please contact us to confirm availability before placing an order.

Mobile-friendly

Responsive A4 layout — looks the same on phone, tablet, or laptop.

Auto-print mode

Add `?print=1` to the URL to fire the browser print dialog on load.

Brand-aware

Company name, GST, and address pull from environment config — no per-quote setup.

Read-only & secure

Public endpoint runs outside the auth wrapper but is rate-limited and token-gated.

When a Sales Order is confirmed, NovaERP auto-generates a **Pick List** with **exact bin / shelf locations** for every line. Stock is physically reserved (Bin.reservedQty) so two pickers can't race for the same crate.

Bin / shelf precision

Each line shows the exact rack-row-bin where the requested qty is stored.

Soft-reservation

Reserved qty is decremented from ATP immediately to prevent oversell.

Scanner-first UX

Pickers scan bin → scan SKU → enter qty. Three keystrokes, no menus.

Partial picks

Pick what's available now, balance auto-creates a back-order line for procurement.

Manufacturing rarely packs exactly what was ordered. NovaERP exposes **edit-on-pack**: the packer adjusts qtyPacked per line, and the invoice is generated from the actual packed quantity — not the ordered one. Variances roll forward into a back-order automatically.

qtyPacked = invoice qty

Removes manual reconciliation between dispatch and finance — what shipped is what's billed.

Carton / case tracking

Capture carton count, weight, and dimensions for the dispatch label and freight calc.

Auto back-order

If less than ordered is packed, NovaERP creates a follow-up line and notifies sales.

Atomic invoice

Generate Invoice button is one click — stock decrement and document creation happen in one DB transaction.

Stock visibility broken down per SKU, per warehouse, per bin — with running ATP that subtracts open reservations and adds expected inbound (POs in transit + active work orders). One screen, no spreadsheets.

The screenshot displays the NovaERP Inventory dashboard. The top navigation bar includes a search bar, a 'Scan' button, and user information for Arjun Patel. The left sidebar lists various modules: Dashboard, Products, Procurement, Price Lists, Quotes, Sales Orders, Picking, Packing, Inventory (selected), Warehouse, Manufacturing, Productivity, Transport, Billing, Reports, Approvals, and Settings. The main content area shows the 'Inventory' section with tabs for Ledger, Valuation, and Batches. Key metrics are displayed in a grid: STOCK VALUE (₹3,37,85,718, +2.4%), TOTAL UNITS (86,999, +1.1%), LOW STOCK (0, +3), and DAMAGED / BLOCKED (42, -2). Below these metrics is a filter bar with options like GRN, Sale, Issue, Production, Transfer, and Adjust. The main area shows a message: 'No stock ledger entries yet. Run GRNs, sales, or production to start the ledger.' The bottom status bar indicates 'Synced', 'Queue: 4', 'API 33ms', 'WH-MAIN - Pune', 'Scanner ready', and 'v1.0.0'.

ATP formula

onHand – reservedForSO + openProcurement + openProduction. Always live.

Bin-level drilldown

Click a SKU to see exactly which bins hold it, with batch / lot numbers.

Low-stock alerts

Reorder points trigger procurement suggestions and notifications.

Cycle-count support

Scan bins to confirm counts — variances post adjustments with audit trail.

Invoices are produced two ways — from a packed sales order (B2B), or directly through the POS for cash-and-carry. All invoices auto-number per fiscal year (INV-2026-####), capture HSN-level GST splits, and post to inventory in one atomic transaction.

The screenshot displays the NovaERP Billing interface. The top navigation bar includes a search bar, a 'Scan' button, and user information for Arjun Patel. The left sidebar lists various modules: Dashboard, Products, Procurement, Price Lists, Quotes, Sales Orders, Picking, Packing, Inventory, Warehouse, Manufacturing, Productivity, Transport, Billing (highlighted), and Reports. The main area is titled 'Billing' and features a 'Point of Sale' tab. It includes a search bar for products, a table for items with columns for ITEM, PRICE, QTY, and SUBTOTAL, and a payment section with options for UPI, Card, Cash, Credit, and Split. The right sidebar shows customer details for ABC Engineering and a summary of the bill with a total of ₹0.

POS for walk-in

Single-screen, scanner-driven POS for cash counter / wholesale outlet.

GST math, baked in

CGST/SGST/IGST split by ship-to state. Round-off configurable per row.

e-Invoice / e-Way ready

Output shape compatible with IRP & e-Way bill APIs for India.

Atomic stock-out

Invoice creation decrements bin stock in the same transaction — no half-states.

Sales pipeline, stock ageing, production yield, dispatch SLA, and worker productivity — visualised with drill-down charts and exportable to CSV. All reports are scoped by warehouse and date range.

Sales analytics

Top customers, top SKUs, conversion funnel quote → SO → invoice.

Inventory ageing

Slow-movers and dead stock identified at the bin level — perfect for clearance pricing.

Production yield

Output vs target per work-order, per station, per shift, per worker.

Exportable

Every chart has a CSV download — paste into Excel or feed your BI tool.

Convert demand into **work orders** with one click. Each WO carries BOM, target qty, routing, and a live output counter so supervisors see throughput against target in real time. Bottlenecks surface visually on the station-load chart.

BOM-driven

Raw materials auto-allocated against work orders; shortages flagged before start.

Live output

Operators tap "+1" or scan finished goods — supervisors see real-time WO progress.

Station load

Heatmap shows which stations are overloaded so balancing decisions happen on the spot.

Worker productivity

Per-operator output rolls up into the daily productivity report and payroll incentive data.

Why implement an ERP — the business case

Beyond the features, the real return comes from the operating model an ERP enforces: **one source of truth**, **fewer manual hand-offs**, and **real-time decisions** at every level. Industry studies (Panorama, Aberdeen, Nucleus Research) consistently report these gains within 12–18 months of go-live.

01 Single source of truth

End the war of spreadsheets. Sales, procurement, production, and finance all read and write to the same dataset, eliminating reconciliation overhead.

02 Faster cash conversion

Quotes → orders → invoices flow in minutes instead of days. Aberdeen reports a 22% reduction in order-to-cash cycle after ERP rollout.

03 Inventory accuracy ↑ 25–40%

Bin-level tracking + cycle counting drives accuracy past 98%, freeing working capital and slashing carrying costs.

04 Lower operational cost

Automated workflows replace data entry. Panorama's 2024 ERP report shows 19% reduction in administrative cost.

05 Better customer experience

Reps quote with live stock visibility, dispatch promises hold, and customers receive shareable digital quotes & invoices instantly.

06 Regulatory compliance

GST, HSN, e-Invoice, and e-Way bill handled natively. Audit-trail per document satisfies statutory and internal audits.

07 Data-driven decisions

Real-time KPIs replace gut feel. Identify slow-movers, bottleneck stations, and credit-risk customers in seconds.

08 Scalable foundation

Add warehouses, plants, or product lines without re-architecting. NovaERP's modular design grows with the business.
